

DOCâ€™S BARSHOE DOTTY

The diagram consists of two identical, vertically stacked branching structures. Each structure begins with a single horizontal line on the left. This line splits into two diagonal lines that meet at a point. From this point, two horizontal lines extend to the right. Each of these horizontal lines then splits into two diagonal lines, which meet at another point. From this second point, two more horizontal lines extend to the right, resulting in a total of four horizontal lines on the far right for each structure. The lines are black and the background is white.
